

Free Workshop on Internet Safety Comes to _____

November, 2008 – Your kids and the Internet. Should you be concerned? What are the dangers? How do you keep them safe? Discover the answers to these and other questions on (date) at (time) at (location), when (name of sponsoring organization) presents *CyberSafe*.

Developed in partnership with the Virtual School Society, *CyberSafe* is an interactive workshop that will help parents and all responsible adults better understand the realities and challenges of the digital landscape. Participants will work through a primer of cyber safety issues, ranging from how kids communicate through Facebook and other social networking media to the recourse available to parents when they encounter inappropriate online content or behavior. You'll be introduced to cyber risks like security, privacy, identity theft, and online bullying. Most importantly, you'll learn some straightforward steps to communicate effectively with the digital natives in your family, and help them engage safely in their online world.

Take an active interest in your child's virtual reality. Sign up for *CyberSafe*: (date) at (time) at (location).

CyberSafe is presented by (name of sponsoring organization) and the Virtual School Society (VSS), an independent, non-profit organization created to enhance the use of distributed learning in British Columbia.

To learn more about the VSS, please visit www.learnnowbc.ca. For more information about the *CyberSafe* workshop, please call (local contact phone number).
